Wireless freedom for every home

Choose the wireless networking product to suit your needs

Introducing Cisco's Linksys wireless home networking range, packed with power and performance that lets you enjoy wireless freedom in every corner of your home.

With the multitude of connected devices (both wireless and wired) available today, Cisco's Linksys home networking solutions let you create a home network that connects multiple wireless devices including laptops, tablets, smart phones, printers, music systems, smart TV's, game consoles and more.

Backed by over a decade of home networking experience and equipped with the latest wireless-N technologies, bandwidth-intensive activities such as streaming video, music and sharing large files between devices become a breeze.

Easy set-up is assured with Cisco Connect software which helps you customize settings; create parental controls; allow guest access and quickly add new devices to your network.

Set up a wireless smart home today.

Whether you use your wireless home network for simple applications or require a higher level of speed and range*, there is a solution to suit your needs.

Works with any DSL or Cable internet service provider

CISCO

Linksys modem routers
so simple, so versatile

Enjoy fast wireless connectivity for your home or home office.

The **Linksys range of ADSL2+ Modem Routers** have built-in high-speed ADSL2+ Modems for a fast, "Always On" connection to the Internet. Wireless connections use Wireless-N technology for fast data transfers, and the four built-in Ethernet ports supply high-speed connections to your wired devices. The Linksys WAG320N is radio band selectable to avoid interference and allow for more bandwidth-intensive wireless activities.

CISCO

Setup and manage with ease with Cisco Connect software

Cisco Connect software puts you in control of your home network, whether you are a networking novice or technically savvy

Quickly add multiple internet-capable devices to your network
Connect additional computers by creating an Easy Setup Key from a USB flashdrive to store wireless network set-up data.

Give visitors password-protected Internet access on a separate network
Setup a guest network for visitors you allow internet access to. They'll be able to access the Internet without connecting to your local network.

Customise your settings and change your network password
You may need to change some of the settings once you've setup your wireless network, such as your wireless network name and password.

Set Parental Controls for each computer or device
With Parental Controls feature you can personalise your settings and prevent your children from continually using the Internet, and even block certain websites.

Cisco Connect Software

☑ Quick Three Step Setup
☑ Customisable Parental Controls
☑ Instant Guest Access
